

Evaluation of RID Project Proposals Submitted during the Compact Preparation Consultations Process

1. In accordance with the Collaboration Agreement signed between MCG and MDF on March 24, 2006 and enforced on April 28, 2006, MCG passed to MDF the database of project proposals submitted during the compact preparation consultation process (first consultation process) that fell under RID mandate. According to the agreement, MDF had to evaluate the proposals. Below are the results of the evaluation.

2. MCG provided MDF with total number of 222 project proposals for evaluation. Those proposals were submitted according to the general application form distributed during the first consultation process that covered all sectors. The purpose of those applications was to define contents of the compact – major directions of the program - through public consultations. Unfortunately, those application forms do not allow for making comprehensive evaluation of the proposals and priority projects within these broad categories.. In addition, the majority of submitted proposals are incomplete in terms of both information and technical aspects. The list of project proposals with respective evaluation is given in the Annex 1.

3. In May 2006 MDF identified 11 projects (5 water supply and 6 irrigation projects) out of those 222 project proposals as candidates for potential funding. These projects with major parameters are given below:

Name	Applicant	Main expected benefits
<i>100% MCG Funding</i>		
Sioni Dam Rehabilitation	Ministry of Agriculture	Security, 65400 ha, 4 hydro stations (30 megawatt), growth of agricultural productivity.
Algeti Dam Rehabilitation	Ministry of Agriculture	Security, 14,500 ha, growth of agricultural productivity
Zemo Samgori Irrigation Scheme	Ministry of Agriculture	35,200 ha, growth of agricultural productivity
Kvemo Samgori Irrigation Scheme	Ministry of Agriculture	30,200 ha, growth of agricultural productivity
Tezi-Okami Irrigation Scheme	Ministry of Agriculture	4400 ha, growth of agricultural productivity
Headwork for Zlevijsvari/Didi Ru Irrigation Schemes	Ministry of Agriculture	4000 ha, growth of agricultural productivity
<i>Parallel Financing (35%) with EBRD</i>		
Poti Municipal Water Supply	Poti Municipality	50,000 beneficiaries, business development, elimination of water-born diseases.
Kutaisi Municipal Water Supply	Kutaisi Municipality	186,000 beneficiaries, business development, elimination of water-born diseases.
Rustavi Municipal Water Supply	Rustavi Municipality	115,000 beneficiaries, business development, elimination of water-born diseases.
Kobuleti Municipal water Supply	Kobuleti Municipality	21,000 beneficiaries (2-times more during the tourist season), tourism development, elimination of water-

		born diseases.
Borjom-Bakuri Municipal Water Supply	Borjomi Municipality	20,000 beneficiaries (2.5-times more during the tourist season), tourism development, elimination of water-born diseases.

4. Selection of the above projects was conditioned by the following main factors:

- 1) High number of project beneficiaries and huge social importance of the problem (water supply for the major Georgian cities. irrigation of about 150,000 ha lands for major part of the population in the East Georgia) that distinguished them from all the other projects proposed significantly;
- 2) More complete development of the projects in comparison with other projects that is conditioned by the fact that other donors (EU, WB, EBRD, USAID) were involved in development of these projects even before the compact preparation.

5. The above projects have status of identified projects - projects for potential funding. i.e., Final decision of funding will be made only if they meet all the requirement set forth in the “Proposal Submission Guidelines” (www.mdf.org.ge/RID/guidelines.pdf). E.g. recently, as a result of further review of the above projects, MDF has decided that irrigation projects of Tezi-Okami and Zlevisjvari/Didi Ru do not meet RID requirements and rejected them. Moreover, the decision was made to conduct feasibility study of all identified irrigation projects, the results of which will provide rational for project implementation. The only project that has gone through all these hurdles is Poti Municipal Water Project, the appraisal document of which can be found on the following link www.mdf.org.ge/RID/potiappraisal.pdf.

6. Applicants of the proposals in the attached list will get written notices on the results of the evaluation. They may resubmit these project proposals according to the new Proposal Submission Guidelines.
